

CLIENT DELIVERY DOCUMENT

Hierarchia Manager Portal Project Quotation

Prepared by: Shahroz Imran

Document Type: Final Commercial Quotation for Completed Work

Project: AI-Powered Manager Portal / Hierarchia System

Currency: PKR

Quotation Value: PKR 1,100,000

Project Status: Completed

Date: May 2026

Prepared by: Shahroz Imran

Document Type: Final Commercial Quotation for Completed Work

Project: AI-Powered Manager Portal / Hierarchia System

Currency: PKR

Quotation Value: PKR 1,100,000

Project Status: Completed

Date: May 2026

1. Quotation Purpose and Completion Status

This quotation provides the **final commercial valuation** for the complete **Hierarchia Manager Portal**, which has already been fully designed, developed, tested, and delivered based on the implemented system scope documented in the delivery pack.

The quoted amount represents the completed development value of the overall platform, divided across major system functionalities, including:

- Role-based portal access
- Team and department management
- Task and assignment workflows
- Document submission and storage
- AI-powered validation pipeline
- Smart AI assistant with RAG
- Real-time messaging and collaboration
- Dashboards, reporting, security, deployment, and go-live support

This is the **final fixed quotation of PKR 1,100,000** for the full system scope that has been completed.

2. System Summary

The **Hierarchia Manager Portal** is a completed web-based enterprise workflow platform built to help organizations manage teams, assign work, receive document submissions, validate those submissions using AI, collaborate internally, and monitor performance through dashboards and reports.

Core business outcomes supported by the system

- Replace manual document review with AI-assisted evaluation
- Centralize task assignment and submission tracking

- Provide controlled access for admins, managers, and members
 - Enable real-time communication inside the platform
 - Improve operational visibility through analytics and audit logs
 - Support secure storage, validation, and retrieval of organizational documents
-

3. Completed Functional Scope Covered by This Quotation

3.1 User Roles and Access Layers

The system supports three controlled roles:

- **Main Admin**
 - Full system access
 - Department and user provisioning
 - Global oversight and configuration
- **Manager**
 - Team-level operational control
 - Task creation and assignment
 - Review of submissions and AI validation results
- **Member**
 - Assigned task visibility
 - File submission capability
 - Access to announcements, materials, messaging, and Smart AI

3.2 Major System Modules

The delivered solution includes the following business modules:

- Authentication and secure login
- Role-based dashboard experience
- Department/team management
- User provisioning and assignment
- Task and deadline management
- Document upload and submission lifecycle
- AI validation rules and scoring engine
- Smart AI assistant with retrieval and live data support
- Internal messaging and file sharing

- Announcements and materials library
 - Reports, charts, and analytics dashboards
 - Activity logs, rate limiting, and system security
 - Deployment setup and go-live assistance
-

4. Detailed Commercial Breakdown

Sr. No.	System Functionality	Scope Covered	Amount (PKR)
1	Discovery, planning, and solution architecture	Functional analysis, module planning, database/flow design, technical architecture alignment	30,000
2	Authentication, user access control, RBAC, and onboarding	Secure login, password flows, role-based access control, user provisioning structure, access restrictions	280,000
3	Team, department, and user management	Department CRUD, manager/member mapping, team structure, user assignment and administrative controls	35,000
4	Task and assignment management	Task creation, assignment flows, due dates, late policies, member tracking, task lifecycle handling	40,000
5	Document submission and secure file handling	Upload workflows, submission tracking, storage integration, late submission capture, controlled downloads	25,000
6	AI document validation pipeline and rule engine	Parsing, OCR fallback, rule execution, weighted scoring, summaries, status generation, configurable validation logic	60,000
7	Smart AI assistant with MCP, RAG, and AI usage logic	Conversational assistant, live data support, document-aware retrieval, MCP-style orchestration, thread history, AI credits/usage controls	180,000
8	Self-hosted real-time messaging and collaboration module	Direct chat, group chat, attachments, presence, typing, reactions, replies, edit/delete flow	300,000
9	Announcements and materials library	Internal notice publishing, priority/expiry handling, shared materials repository, access-based visibility	20,000
10	Dashboards, analytics, and reports	KPI cards, charts, trends, usage statistics, reporting views, operational monitoring screens	25,000
11	Security, audit trail, rate limiting, and scheduled jobs	Audit logs, secure access layers, AI governance controls, abuse protection, cron jobs, recovery routines, policy-based controls	70,000
12	QA, deployment, UAT support, and production launch	Testing, stabilization, deployment configuration, launch support, issue resolution during handover	35,000
Total Quotation			1,100,000

5. Detailed Explanation of Cost Allocation

The following amounts reflect the commercial value of the completed work delivered under each module of the system.

5.1 Discovery, Planning, and Solution Architecture — PKR 30,000

This portion covers the completed product understanding, workflow mapping, architecture planning, and technical decomposition that enabled final delivery of the system.

Included work:

- Functional requirement analysis
- System flow mapping
- Module planning and dependency breakdown
- Database and integration planning
- Delivery structure for a scalable portal

5.2 Authentication, User Access Control, RBAC, and User Onboarding — PKR 280,000

This covers the core identity, permission, and user-access foundation of the application.

Included work:

- Login and session handling
- Password reset/update flows
- Role-based access control for admin, manager, and member
- User access segmentation across portal modules and data visibility
- Restricted access by user responsibility
- User provisioning and onboarding logic
- Access segmentation across the portal

5.3 Team, Department, and User Management — PKR 35,000

This module controls the organizational hierarchy inside the portal.

Included work:

- Department/team creation and management
- Manager assignment to departments
- Member assignment and transfer logic
- Team statistics and administrative oversight
- Controlled visibility based on organization structure

5.4 Task and Assignment Management — PKR 40,000

This is one of the central operational modules of the platform.

Included work:

- Task creation with instructions and due dates
- Team-wide or selective task assignment
- Submission status mapping
- Late submission configuration
- Missed-deadline handling
- Manager review flow for assigned work

5.5 Document Submission and Secure File Handling — PKR 25,000

This covers the complete document intake lifecycle.

Included work:

- Member file uploads
- File validation by format and size
- Submission history and traceability
- Secure storage integration
- Protected file access/download routing
- Late reason capture and submission state management

5.6 AI Document Validation Pipeline and Rule Engine — PKR 60,000

This module contains the core AI processing logic for automated document evaluation.

Included work:

- Multi-format content parsing
- OCR fallback for scanned/image-based files
- AI rule execution per document
- Thresholds, weights, and custom rule configuration
- Weighted aggregate scoring
- AI-generated summaries and risk indicators
- AI workflow orchestration across validation stages
- Final submission classification such as pass, fail, or review required

5.7 Smart AI Assistant with MCP, RAG, and AI Usage Logic — PKR 180,000

This is one of the most technically demanding modules because it combines advanced AI interaction, MCP-style orchestration, retrieval logic, and governed AI usage.

Included work:

- Conversational Smart AI interface
- MCP-style AI orchestration and tool-connected assistant behavior
- Retrieval of relevant indexed content
- Live-system contextual assistance
- Per-user conversation threads/history
- AI document-assisted context support
- AI usage and credit limitation logic
- Role-aware assistant experience

5.8 Self-Hosted Real-Time Messaging and Collaboration Module — PKR 300,000

This self-hosted messaging module enables internal communication without relying on external tools.

Included work:

- Direct messaging
- Group conversations
- Realtime message delivery
- Presence and typing indicators
- Replies, reactions, and edit/delete flows
- Attachment handling for collaboration media/files

5.9 Announcements and Materials Library — PKR 20,000

This module supports internal communications and reference distribution.

Included work:

- Announcement publishing
- Priority and expiry handling
- Team/global visibility rules
- Materials upload and listing
- Shared document availability for users

5.10 Dashboards, Analytics, and Reports — PKR 25,000

This covers visibility, monitoring, and decision support for management.

Included work:

- KPI dashboard cards
- Daily and periodic reporting views
- Charts for submissions, pass rates, and trends
- Team/member performance views
- Usage and operational summaries

5.11 Security, Audit Trail, Rate Limiting, and Scheduled Jobs — PKR 70,000

This portion covers platform hardening and operational reliability.

Included work:

- Audit logging of user/system actions
- Multi-layer access enforcement
- AI governance and protected access controls
- Request and AI usage rate limiting
- Scheduled background jobs
- Recovery handling for failed/stuck processes
- Controlled access to sensitive records

5.12 QA, Deployment, UAT Support, and Production Launch — PKR 35,000

This covers the final delivery and production readiness stage.

Included work:

- Functional QA and regression checks
- Environment configuration and deployment setup
- User acceptance support
- Production launch assistance
- Stabilization and handover support

6. Commercial Notes

This final quotation is prepared on the following commercial basis:

- The quotation covers the **complete portal scope** listed in this document as completed.
- The total commercial value is fixed at **PKR 1,100,000**.

- Approximately **53% of the quotation value (PKR 580,000)** is intentionally weighted toward the platform's **self-hosted real-time messaging system and user access control/RBAC layers**, reflecting the highest-complexity and highest-value implementation effort.
- The quotation reflects completed software design, development, integration, testing, deployment, and handover support.
- Post-delivery revisions and ongoing maintenance are evaluated separately based on scope and complexity.
- Third-party recurring charges are **not included** unless separately agreed.

Examples of third-party or recurring items that are typically billed separately:

- Cloud hosting / server charges
 - Domain and SSL costs
 - Cloud storage costs
 - AI API usage charges
 - Email/SMS gateway charges
 - Ongoing maintenance after warranty/support period
-

7. Revision and Maintenance Plan

After the completed delivery, any further revisions will first be reviewed based on their technical complexity, architectural impact, and implementation effort. The final revision price will therefore be defined only after scope review.

7.1 Revision Categories

1. Major Change

- Includes architecture changes, new modules, major workflow redesigns, or large feature expansions.
- Pricing will be defined after detailed complexity evaluation.

2. Minor Change

- Includes limited logic changes, small UI updates, controlled workflow adjustments, or low-impact functional edits.
- Pricing will be defined after complexity evaluation.

3. Improvements

- Includes refinements, optimizations, usability improvements, and small system enhancements.
- Pricing will be defined after complexity evaluation.

7.2 Revision Pricing Basis

Revision pricing will be determined according to:

- Scope size
- Technical complexity
- Architecture and database impact
- API, UI, and workflow dependency changes
- Testing, deployment, and verification effort

7.3 Monthly Retainer for Server Cost and Maintenance

A monthly retainer of **PKR 30,000** may be applied for ongoing server cost and maintenance support.

This monthly retainer may cover:

- Server and infrastructure continuity costs
- Routine technical maintenance
- Monitoring and operational support
- Resolution of unexpected errors or production issues
- Small maintenance-level fixes required to keep the system stable

Major revisions or major scope changes are not automatically included in the monthly retainer and will be priced separately after complexity review.

8. Delivery Timeline Reference

For commercial reference, the completed system scope aligns with the following delivery timeline band:

Phase	Estimated Duration
Planning and architecture	1 to 2 weeks
Core portal modules	4 to 6 weeks
AI and advanced collaboration modules	4 to 5 weeks
Testing, UAT, and deployment	2 to 3 weeks
Total Estimated Timeline	11 to 16 weeks

9. Reference Payment Milestones

For billing and commercial reference, the following milestone structure may be used against the completed project value:

Milestone	Percentage	Amount (PKR)
Project initiation and planning	30%	330,000
Completion of core modules	30%	330,000
Completion of AI, messaging, and reporting modules	25%	275,000
Final deployment and handover	15%	165,000
Total	100%	1,100,000

10. Final Quotation

Based on the complete functionality of the **Hierarchia Manager Portal**, including its admin/manager/member workflows, AI-powered document validation, Smart AI assistant, real-time communication modules, analytics, security controls, and deployment support, and considering that the system has been fully completed, the **final quoted project value** is:

Final Quotation: PKR 1,100,000

In words

Pakistani Rupees Eleven Lakh Only

11. Closing Note

This quotation serves as the final commercial record for the completed **Hierarchia Manager Portal** and is suitable for client submission, internal billing reference, or formal project closure documentation.

If needed, this quotation can also be expanded into:

- A formal company proposal
- A milestone-based commercial agreement
- A software house submission version
- A client-ready PDF quotation format
